

Installation of Full Size Paddles for Thrustmaster Wheel Hubs

This guide will take you step by step through the installation of your new full size paddles to fit on the GTE, TM28 and 599XX EVO add-on wheel rim hubs.

CAUTION: Be careful to avoid static build-up while handling the electronics in your wheel. Ricmotech is not responsible for any damage you may cause to your wheel.

Begin by removing the 2 screws accessible through the openings in the paddles.

Remove the 3 or 6 screws securing the original wheel to the hub.

Temporarily remove the D-Pad and grounding spring.

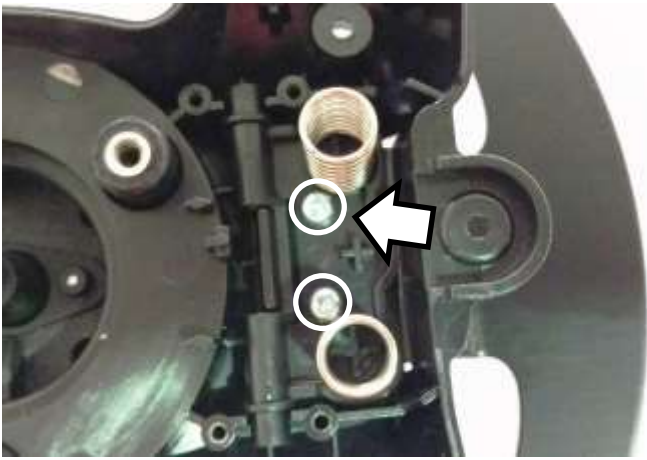

Remove the Quick-Release and unplug the internal cable.

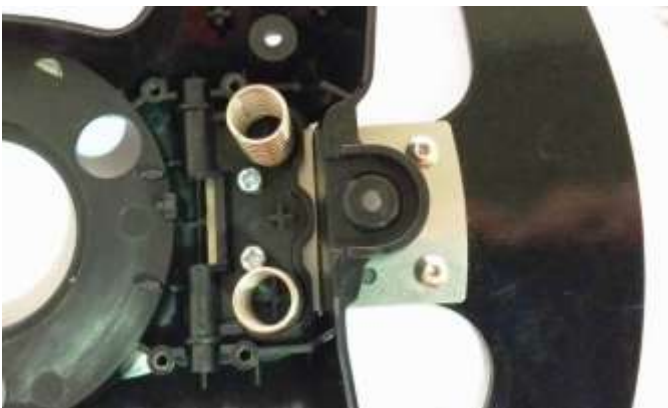

Remove the 4 screws to open the back cover.

Starting with one side first, remove the 4 screws holding the paddle springs in place.

Temporarily set aside the paddle springs. Then remove the 2 screws securing the paddles to the pivots.

Insert the pre-assembled paddle into the slot and secure to the original plastic pivot with the 2 original screws. Repeat the last 3 steps on the other side.

Re-assemble internal paddle spring retainers as shown. Replace the cover onto the housing and secure with the 4 original screws.

Plug the quick-release into the plug of the internal circuit board and place the quick-release into the rear housing.

Mount the steering wheel or your Ricmotech wheel adapter to the front to secure the quick-release into place.

The paddles have 2 mounting positions on the mounting tabs. The narrower position is suitable for 320mm to 340mm wheel rims, while the wider position is good for 340mm or larger wheel rims.

Need Help?

If you run into any problems during the installation of the paddles, please contact us directly at technical support at (305) 417-9241 or via email at mail@ricmotech.com.

Due to constant improvements to our products, the product you receive may vary slightly from the product shown in the illustrations.
